Top-Load-Series

Applications:

High Speed Top Load Series of machines particularly suitable for pharmaceutical and food industries, with an ergonomic and open hygienic design for ease of maintenance and cleaning. Typical applications include: medical and pharmaceutical products, confectionary, pastries, frozen products and meat products.

Functional sequence:

All main operations are driven using modular servo drives and the machines are equipped with touch screen HMI panels for ease of

operation. Machines are constructed for 3 shift operation using heavy duty construction and precision engineered format parts

Features:

- Modular servo drive systems
- touch-screen control panel
- Visualization of operation sequences
- Quick repeatable operator size changes, using hand wheels with digital counters, and easily removable and/or adjustable size parts.

Options:

- Range of automatic product feeding systems, with upstream and downstream modules available for complete line integration
- Option to tailor to specific customer specifications, and integrate customer equipment.

Technical data:

Mode: intermittent erecting, continuous closing
Speed*: max. 200 cycles/min.
Closing techniques: ● hot melt glue ● interlocking and gluing

size range:

	L	B	H
min.	80	80	20
max.	300	300	100

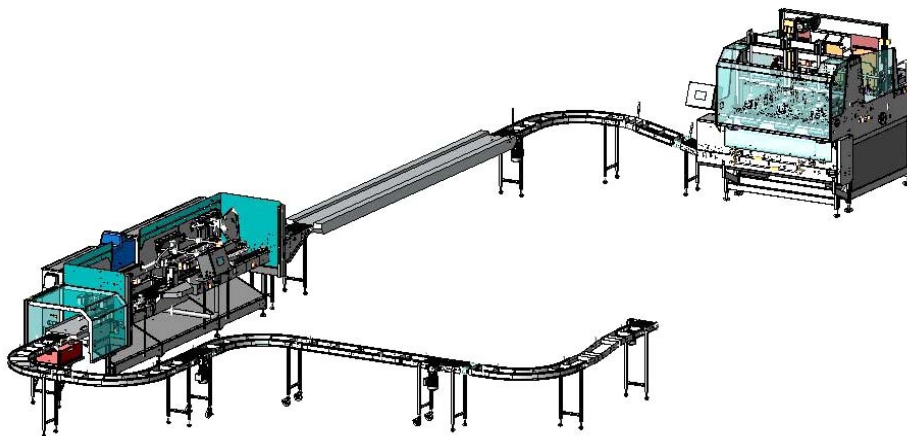

various formats on request
horizontal 650-1500 mm

Carton magazine:

Weight of standard machine: 2000 kg

* depending on cardboard box format and/or product
