Press Release - Dienst Verpackungstechnik GmbH

No need for bad conscience – sweet and delicious in large or small packaging units – packed by DIENST

Durability thanks to quality.

We are premium manufacturers in the area of horizontal cartoners (side load) within the food industry. In addition, we also sell machines for top load and end of line applications.

We offer customer-specific machine solutions upon request and are a recognized partner of leading international producers in the food and non-food industries.

Further information please refer to www.dienst-packsystems.de

The 24" American Case (End of line) packer Type HE-AC has been delivered and installed at this well-known multinational company in the field of confectionary.

Intensive consultancy especially on carton design led to a further machine order. This type of packer is able to run up to 9 different packing formations with an average packaging speed of up to 60 cycles per carton unit and per minute.

The American Case End of Line packer is equipped with a folding box conveying system and a carrying-handle flap shifter.

Due the customer's very special packaging, here with a precious metallic look in a high-quality 3-D-design, must be meticulously handled and packaged. Without being creased in the slightest way the carrying-handle flap is constantly shifted in the same direction.

Manufacturers of standard components and packaging machines usually do not bother taking customer's special wishes into consideration. Dienst, however, fulfills this kind of demands because of the wide and long experiences gathered in the past years. Always following the maxim of: "guaranteeing a secure and trouble-free production".

Precisely adapted to fit the situation of the customer's building, the machine and its accessibility was considered and planned beforehand. Specially for this customer vertical swinging doors have been chosen and realised. The manual process up till now has been fully automated by buying a DIENST packaging machine.
